Education

VIT-AP University, Amaravati, Bachelor of Technology in Computer Science 2022 – 2026

- GPA: 8.51/10
- **Coursework:** Data Structures & Algorithms, Machine Learning, Computer Networks, Operating Systems, DBMS, OOP

Experience

AI-ML Intern | The SmartBridge June 2026 – Present

- Built MedRAG Hub, a RAG medical report analysis tool (ChromaDB vector search, embeddings, OCR, Gemini API); fine-tuned a cybersecurity LLM (TinyLlama, QLoRA) and ran LLM evaluation with BLEU, ROUGE, BERTScore.

AI Engineer Trainee | Phaze AI Jan 2026 – Apr 2026

- Built a WhatsApp-based AI HR agent using n8n, GPT-4 API, and multi-tool agent workflows to automate leave requests, GPS attendance tracking, and sales meeting logging, with API integrations and agent memory.

AI-ML Intern | Zenith India Oct 2025 – Jan 2026

- Developed end-to-end Python AI/ML systems: a personal finance advisor, a dynamic pricing engine (Scikit-learn, XGBoost), and a hybrid recommendation system with deep learning ranking and Gemini LLM fallback.

Projects

Blog Agent — Autonomous Multi-Agent Technical Blog Writer GitHub

- Developed an autonomous multi-agent blog-writing system using LangGraph, FastAPI, and the Gemini API with Map-Reduce fan-out across 5–9 parallel sections.
- Built fault-tolerant key rotation with exponential backoff, plus a full-stack React/TypeScript SSE dashboard for real-time agent monitoring.

Multi-Modal AI Research Paper Q&A Platform GitHub

- Built a multi-modal RAG architecture using LangChain and a ChromaDB vector database to process complex scientific PDFs; implemented YOLO-based layout parsing to accurately isolate and categorize dense text, nested tables, and graphical figures.
- Engineered a visual-to-text embedding pipeline utilizing the Gemini 2.5 Vision API to dynamically generate summaries of extracted charts and tables, enabling comprehensive semantic search and citation-backed Q&A across both visual and textual modalities.

GENOME LLM Visibility Prediction System GitHub

- Developed two-stage XGBoost pipeline predicting web source visibility for 4,996 sources across 989 queries; engineered query-relative percentile features addressing 70% zero-inflated data, achieving near-perfect classification of top 25% sources (1,249 identified) with 2.04 visibility threshold.
- Deployed a production pipeline (Streamlit) with SHAP explainability and within-query normalization, identifying WC, Influence, and Relevance as key ranking predictors for LLM systems.

Skills

Languages: Python, SQL, TypeScript, Java, R
LLM and AI Agents: LLMs, AI Agents, Agentic Workflows, RAG, Embeddings, Prompt Engineering, LLM Evaluation (BLEU, ROUGE, BERTScore), LLM Fine-tuning (QLoRA), MCP, Gemini API, OpenAI GPT-4 API
Frameworks and Backend: FastAPI, LangChain, LangGraph, n8n, REST API Development, React, Streamlit, PyTorch, Scikit-learn, XGBoost, SHAP, Hugging Face / Transformers
Data and Cloud: Vector Databases (ChromaDB, Pinecone), Neo4j, DynamoDB, AWS Lambda, AWS CDK
Tools and Concepts: Workflow Automation, Cloud Deployment (AWS), Git, Linux, Jupyter Notebook, VS Code, YOLO, OCR, Machine Learning, Deep Learning, Computer Vision, DSA, Object-Oriented Programming (OOP)

Achievements & Certifications

- **Competition:** Finalist, Productathon 2025 (AI Track) – IIT Roorkee
- **Certification:** AWS Certified Cloud Practitioner (June 2025) – Scored 762/1000 (Pass: 700) Verify
- **Certification:** Oracle Cloud Infrastructure 2025 Certified Generative AI Professional (July 2025) Verify
